

Green port

For HAROPA PORT, reconciling economic development and the environment is a major challenge.

- HAROPA PORT -
Published on 2 April 2019

A strategy that revolves around three priority areas:

- › Promoting virtuous logistics solutions: promoting a modal shift to limit the emission of greenhouse gases
- › Reducing the impact of port activities
- › Integrating the ports into their natural and urban environment

A "Green Port" policy:

Supporting initiatives / projects:

- › Development of new fuels / electrification of the fleet / launch of trophies to reward these initiatives (ESI and river fleet trophy)
- › Quay electrification project

A recognised strategy, obtaining the Best Green - Sea Port trophies since 2015.
