

### construction, development River access to Port 2000: the project moves up a gear

With the decision by the Conseil d'Etat on Friday 13 December 2024 rejecting the appeal to the Supreme Court, the River access to Port 2000 is now entering a new phase of construction. The notification of the works contract to the TERELIAN/SDI consortium (DEME Group) marks the start of the first works on site, including the launch of a pyrotechnic detection campaign.

The TERELIAN company, as leader, and its co-contractor, SDI (DEME Group), must first deploy **apyrotechnic detection campaign** on the site of the future structures.

This is a crucial stage: the history of Le Havre, which was bombed during the Second World War, requires meticulous checks to locate and neutralise any explosive devices. This is done by electromagnetic detection and, if necessary, by divers. Objects identified as dangerous are secured by the government's mine clearance services.

This work, which also includes the removal of bulky items, is essential to guarantee the safety of the site. It will take an estimated 6 months to complete.

#### Continuity of action

**This new project is part of the preparatory work undertaken by HAROPA PORT** in early 2024 as part of its environmental measures. The port has, for example, installed buoys equipped with submerged hydrophones to characterise underwater noise during the works.

#### A strategic project for modal shift

River access to Port 2000 represents a major challenge for the creation of a carbon-free logistics corridor along the Seine. The River access to Port 2000 will **eliminate offloading, make traffic more fluid and significantly increase the number of containers transported by inland waterway to and from Le Havre.**

It demonstrates **HAROPA PORT's determination to make inland waterway transport a cornerstone of tomorrow's logistics chain.**

The project, worth a total of €197m, is being financed as follows: €86.05m by the Normandy Region, €3.6m by the French State, €24.9m by the European Union (via the Connecting Europe Facility) and €82.45m by HAROPA PORT.
