

## HAROPA PORT | Le Havre obtains the AFNOR ISO 14001 certification

For the first time in its history,

Le Havre regional management has been awarded ISO 14001 certification for its environmental management.

►► This certification completes the environmental approach of HAROPA PORT which becomes a green corridor on the Seine axis range.

### HAROPA PORT | LE HAVRE

ISO 14001 since 2021

for all its activities

### HAROPA PORT | ROUEN

ISO 14001 since 2017

for the port operation of the Radicatel terminal and the management of dredged sediments

### HAROPA PORT | PARIS

ISO 14001 since 2013

for the operation of the above platform of Gennevilliers and the creation of new ports

These certificates are the recognition of the ways and means allocated by France's leading port to provide an environmentally friendly service. They confirm the value of a proactive policy to make environmental issues integral to the management of the port's projects.

*"These certificates constitute recognition not of the transition but of the far-reaching transformation in which we have been engaged for several years now. It is a daily challenge for our teams because we are aware of the impacts our activities can have on the environment. But it is our responsibility as a public entity to take every possible step to make our industrial and port complex more environmentally friendly."*

Stéphane Raison, CEO of HAROPA PORT

►► This environmental approach is part of a broader ambition to make the entire supply chain greener through HAROPA PORT corridor.

As a proof of this engagement, HAROPA PORT | Le Havre received last October the Best Green Seaport award for the 5th time, facing the ports of Hamburg, Long Beach and Singapore.

The prize was awarded after a vote by 15,000 Asian customers and partners, organized by Asia Cargo News which covers supply chain and logistics news in the Asia-Pacific region.
