

**Introducing My T&T, a container tracking solution for the Seine Axis. The first web application by GIE easyport - available free of charge.**

Formed in 2022 by HAROPA PORT and SOGET, a software publisher based in Le Havre, the mission of economic interest grouping GIE easyport is to ensure that goods flows along the Seine Axis are reliable, optimized and can be tracked.

As the first solution developed by easyport, **My T&T** allows users to determine the location of containers in the transport chain based on the container number, regardless of who has actual contractual responsibility for the containers concerned. This is key information for monitoring the passage of goods along the HAROPA PORT corridor.

Container movements registered in the Port Community System S)ONE are fed to the My T&T application, allowing the key information to be provided without loss of time.

## My T&T, a container tracking solution

### ► The application in brief

- Tracks containerized goods flows for both imports and exports
- Monitors multimodal goods transport on the Seine Axis
- Provides highly reliable real-time data
- Can be accessed free of charge

### ► Who is it for?

- Transport organizers
- Shippers and industrial firms (importers and exporters)

"My T&T is the first GIE easyport product and is the outcome of a successful collaborative project involving HAROPA PORT and SOGET I am pleased to announce. This software application is aimed at enhancing the attractiveness of our ports by offering customers a value-added service for the traceability of their goods. This tools is also intended to further our goals for modal transfer on the Seine Axis".

Stéphane Raison, general manager and chair of the board of management of HAROPA PORT

"Goods tracking is useful for ensuring fluid and efficient throughput, taking into account the supply chain's traceability requirements. It allows transport and logistics operations to be optimized while at the same time reducing costs by avoiding handling delays and errors. This free web application is intended for use by importers and exporters wishing to monitor the passage of their goods from the ship to their depot. But it is also for end customers, allowing them to track their containers from anywhere in the world without connecting to S)ONE."

Hervé Cornède, GIE chair and chair of the board of management of SOGET
