

## NOVA MET chooses Le Havre for its new aluminium recovery and recycling plant

NOVA MET signaled the start-up in January of its activities

for production of aluminium from recycling, signing a land use agreement with HAROPA PORT. The company had the benefit of support from the Le Havre Seine development agency.

### Characteristics of the new NOVA MET facility

▶ 20,000 sq. m. in area

▶ 2,500 tonnes of aluminium processed each month

▶ 15 direct jobs created in the Le Havre employment area

▶ 80 containers per month exported to South Asia by 2023

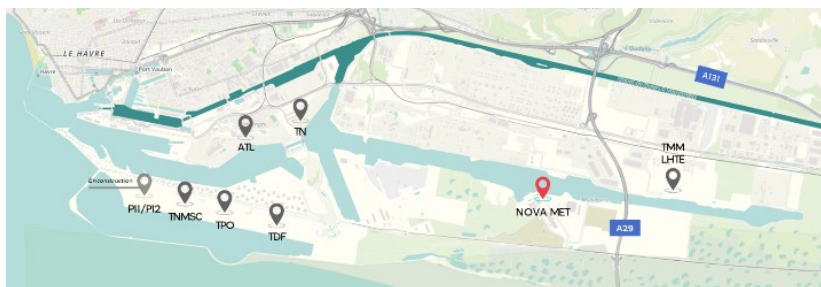

▶▶ By choosing Le Havre as the location for its second production facility, NOVA MET is setting out to take advantage of its strategic positioning in the port area to underpin its outreach to international markets, especially in Asia and Europe.

*"The agreement signed today with HAROPA PORT is for us the start of a grand adventure and an opening out to the world via the sea. We are conscious of current ecological issues, and in our view aluminium offers a way of helping address tomorrow's environmental challenges."*

Alexis Noyer,  
Associate Director of NOVA MET

*"The signing of this agreement with NOVA MET in Le Havre comes as confirmation of the advantages of HAROPA PORT for manufacturing companies active in decarbonisation along the Seine Axis. It also addresses a number of goals central to our strategy: to develop synergy between firms operating in the port industrial area and to make the ecological transition a real economic asset."*

Sylvain Leveux,  
acting Deputy CEO of HAROPA PORT | Le Havre
